Cheyenne Pierpont, Bailey Forbes, Brandon Maurer

October 29th Meeting 2024

Design Capstone

Professor Finkbine

10/29/2024

Zoom Class Meeting from 7:30-8:30

What we did from last meeting till now:

Cheyenne's View:

- We all worked on RF-3 I helped with setting up RF-3
- I communicated with the customer over the last three weeks. We had some trouble getting ahold of each other. She was traveling for work, and I was looking through websites getting a handle of information she may have wanted on the app, but I ultimately had to wait to make sure we had the information she wanted the public to see.
  - o I got the logo last week and information approved, and I have been going through and updating the documents with information she wants on the app. Also, with CCCS Logo.
- RF-3 we worked delegated, then Brandon worked with the prototype and Bailey more on the backend of the project.

Brandon View:

- Researched front end of the app development
- Created the prototype
- Has been taking notes, updating and working on the prototype.

Bailey view:

- Took Rf-3 and put into latex added the document
- Has been working on the backend of the project.

Risk:

- Server Migration: Every 3-4 years when new hardware is procured, data migration would be handled through bulk data export/import using tools like mysqldump for MySQL and reconfiguring the Heroku deployment.
